

KIDSVILLE

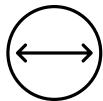

Volume 1, Issue 2

LEARN

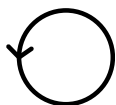

On March 14th, it's fun to celebrate a math holiday called **Pi Day** because the date makes the numbers **3.14** which is π , (Pi).

Pi or π is a mathematical constant whose value is the ratio of any circle's circumference to its diameter.

Here's how the math works: A diameter of a circle is the distance across it.

The **diameter** times pi ($\pi = 3.14$) will equal the **circumference** or distance around the circle.

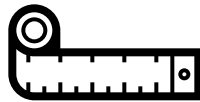

Pi or π is also a letter in the Greek alphabet.

Kidsville likes to celebrate Pi day because of its Greek alphabet symbol and the Parthenon's many mathematical treasures.

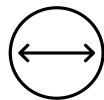

EXPLORE

Go get: a long piece of string or ribbon, or a measuring tape.

Go hunting: for circles to measure.

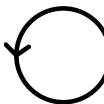

Go measure:
diameters

- the distance across the circle

- like arms stretched out open

circumferences

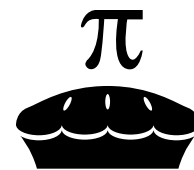

- the distance around the circle

- like arms wrapped around someone or something for a hug

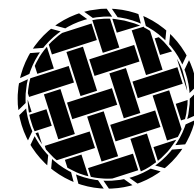

CREATE

Make a pi day pie

YOU WILL NEED:

- 1 small paper bowl
- 1 circle of paper or small paper plate
- bits of paper rolled up for pie filling
- glue for attaching the pie circle to the top of the bowl
- markers or crayons for decorating and writing
