

Water: Lifeblood of the Earth Crossword Puzzle

Word Bank:

- Aquifer
- Cave
- Deposition
- Erosion
- Filtration
- Grotto
- Ground Water
- Impermeable
- Limestone
- Non-Point Source
- Permeable
- Point Source
- Spring
- Stalactites
- Stalagmites
- Surface Water
- Water
- Water Cycle
- Watershed

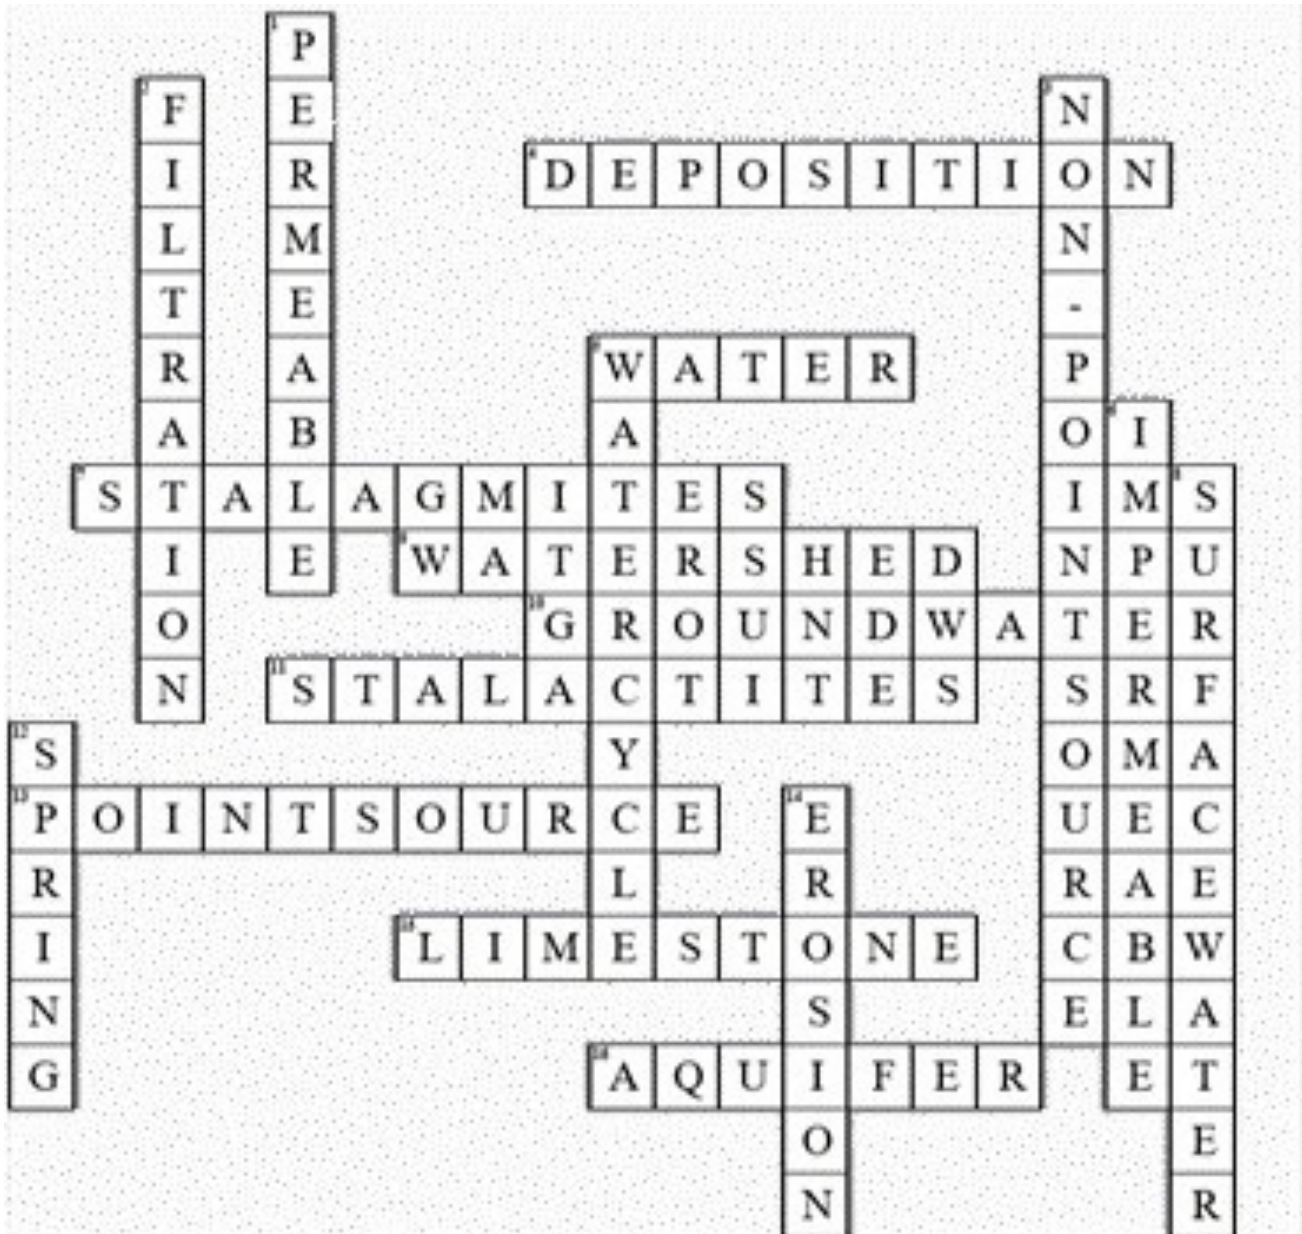

Across

- 4 The process of removing material (soil, rocks, sediments) from one location and moving it to another location, which can be done by natural process like water, wind, ice, or gravity.
- 5 A unique substance that can exist as a solid, liquid, and gas.
- 7 A type of cave formation made up of calcium carbonate that grows on the floor.
- 9 An area of land where all the water collects.
- 10 Water located underground. (2 words)
- 11 A type of cave formation made up of calcium carbonate that grows on the ceiling.
- 13 A type of pollution that can be traced back to a single source. (2 words)
- 15 A hard sedimentary rock that is porous in Central Texas, made up of calcium carbonate.
- 16 Underground layer of permeable, porous, or fractured rock that holds and moves water.

Down

- 1 Description of something that allows liquid to pass through it.
- 2 Removal of solid material from a liquid through the use of small pores.
- 3 A type of pollution that can not be traced back to a single source. (2 words)
- 5 The name of the process by which water circulates between the earth's oceans, atmosphere, and land. (2 words)
- 6 Description of something that does not allow liquid to pass through it.
- 8 Water located on the surface, like in a river, stream, pond, or lake. (2 words)
- 12 When water flowing underground comes back to the surface.
- 14 The process of removing material (soil, rocks, sediments) from one location and moving it to another location, which can be done by natural process like water, wind, ice, or gravity.
