

How to Prescribe a Compounding RX

Call in to San Jose Compounding Pharmacy - 408-296-5015:

Simply call in the prescription. If you are unsure of what to order or have questions regarding the prescription, call in and speak with one of our Pharmacists. We can do any research needed or make a recommendation based on our extensive database formulary in house. We are happy to help you find the right solution!

Fax Rx to 408-248-2790:

If you use the same types of compounded medications routinely, we can customize an easy to use template that you can photocopy and fax to us. Or you can write it out on a regular Rx pad and fax to us. Whatever is easiest for you!

TIPS:

Always include a legibly printed name and phone number for both the prescriber and patient. We are here to help you. Never hesitate to call us to discuss a patient and their prescription - we can assist you before the patient leaves your office! – 408-296-5015.

What happens once we receive the Rx?

Please remember that compounded medications are prepared to order and we do not begin preparing the medication until we have spoken with the patient for their approval. Once we have received a prescription, the patient is called and we review the medication being ordered, answer any questions they may have and tell them the cost. ***As soon as we receive the patient's approval*** to make the medication, the Rx is prepared and dispensed. (Most prescriptions are prepared within 24 - 72 hours of patient approval.) After several quality control checkpoints, the Rx will receive its final check. The medication can be shipped to the patient or we will call the patient to let them know their medication is ready to be picked up, depending on the patient's preference. As a courtesy, we always call the patient to let them know their medication is ready for pick up.

Thank you for your confidence and support in San Jose Compounding Pharmacy!
