Motion Concepts Introduces ROVI X3 Power Base

TONAWANDA, New York – (June 8, 2015) – Motion Concepts is proud to introduce the new ROVI X3 power base with Motion Concepts power positioning. Initially offered in K0856 and K0861 HCPC codes, the ROVI X3 power base is available exclusively through Motion Concepts as a package with Motion Concepts power positioning.

The ROVI X3 power base boasts the narrowest wheelbase in the industry at 23.25 inches along with easy service access to critical electronic components and strong performance through Active Ride Control (ARC) suspension. The center-wheel drive ROVI X3 power base also features GP34 batteries and a unique chassis configuration for more stability and less overall width.

The new ROVI X3 power base gives providers and clinicians easy access to the industry-leading modularity and function of Motion Concepts Ultra Low Maxx power positioning technology and Invacare Matrx Seating and Positioning via one order form and one phone call to provide a complete solution to power mobility needs.

For more information, call Motion Concepts customer service at 888-433-6818, contact your local Motion Concepts independent sales representative or Invacare territory business manager or visit www.MotionConcepts.com. Follow Motion Concepts on Facebook and Twitter to stay up-to-date with all the latest advancements and announcements.

Motion Concepts creates an extensive range of power positioning and seating products to satisfy all clients' needs, from basic to complex. Whether clients require tilt to alleviate pressure, or the added function of an elevating seat to access out-of-reach items, Motion Concepts offers effective and economical solutions in the shortest time-frame possible.
