

WE SAY NO THANK YOU..

to 1.6 million gallons of treated wastewater
going in the Blanco River every day*

We are your friends and neighbors.
We love this river and the community of Blanco.
We want to work with our city leaders to set the
standard for our future.

So, what's the problem? The Blanco River
is a beautiful treasure of the Hill Country – but its
flows are too low, and its water is too clean to
manage the proposed daily dose of treated waste-
water without inevitable degradation.

We want to keep our river clean –
not only here in Blanco, but downstream too. We want to
attract people and businesses to Blanco where we all accept
the shared responsibility to preserve what we have.

There are better ways. Discharge into the Blanco
River is not the only way to manage our wastewater.
Working together, we will find an acceptable solution.

Let's work together to keep our river pristine and our community thriving.

ProtectOurBlanco.org

* The City of Blanco is requesting a permit from TCEQ to discharge 1.6 million gallons of treated wastewater daily into the Blanco River.
