

Geologic cross section along the Blanco River showing the geologic and hydrogeologic units. The faults shown are normal faults of the Bfz. Note the Edwards and Trinity Aquifer are both stratigraphically stacked and structurally juxtaposed. Groundwater flow is schematically shown to move across faults. Line of section A to A' is down the Blanco River in Figure 1. Figure modified from Smith et al. (2015). Vertical Exaggeration is ~100x.

Thank You
