

RETAIL & NATIONAL PROJECTS

GPRS is the trusted leader for damage prevention in the retail, restaurant and national chain sector. Our Project Managers deliver results for an array of project types. From retail rollouts to new online order pick-up stations, GPRS is the clear choice for utility locating and concrete scanning.

CURBSIDE PICKUP

As grocers and other retailers expand their capabilities as it relates to curbside pickup, more stanchions, signs, and pedestals must be placed along curbs and in parking lots. Without a private utility locate during the installation process, there is a risk of underground utility strikes.

ADAPTIVE REUSE

With the rise of e-commerce and the general changing tides in the retail space, contractors and owners are tasked with the repurposing of vacant box stores, offices and strip malls. GPRS can provide critical information regarding the subsurface such as the location of utilities, reinforcement and USTs.

RETAIL ROLLOUTS

When relocating cash wraps, launching new products or remodeling a store, the need to cut or core concrete slabs presents a safety risk. Saw cutting and coring into an electrical conduit not only presents risk for the operator and nearby workers but also risks shutting down the site or nearby sites.

EFFICIENCY UPGRADES

With customer service being a central focus for retailers and restaurants the same, upgrades are often made to increase efficiency and reduce wait time. When adding canopies, drive-thru lanes, or self-checkout kiosks, excavation must occur. A comprehensive private utility locate is a must in order to mitigate risk.

UTILITY LOCATING

To ensure the overall timely success of your project, utility detection is critical to any construction project where subsurface excavation is planned. If this critical first step is ignored, the risk for injury increases, budget overruns can multiply and your schedule can be delayed.

SIM

The use of proper training, multiple technologies and a field-tested methodology is key to a successful concrete scan or utility locate. GPRS is a master of all three components through the utilization of the SIM Specification.

- TRAINING
- EQUIPMENT
- METHODOLOGY

CONCRETE SCANNING

There is an inherent risk of striking rebar, conduits, and post tension cables during the cutting or coring process. If a strike occurs, repair costs begin to add up, delays creep into your schedule and it creates a safety hazard for your employees.
