

WartPEEL®

(5-Fu 2%, Sal Acid 17%) in Remedium™

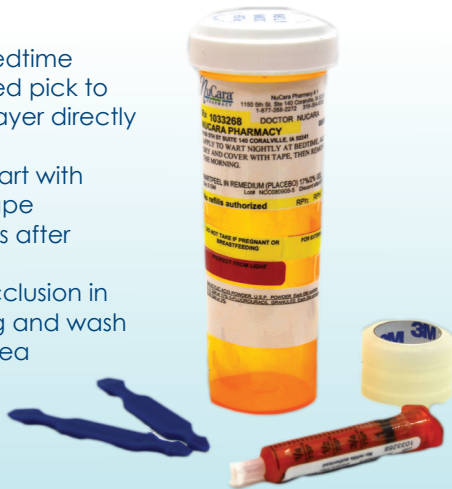

Transdermal/Topical Pain Preparations

Description of the Medication:

This medication contains Salicylic Acid and 5-Fluorouracil in a proprietary base that is used to treat warts.

Simple to Use:

- Apply at bedtime
- Use enclosed pick to apply thin layer directly onto wart
- Occlude wart with provided tape
- Wash hands after application
- Remove occlusion in the morning and wash affected area thoroughly

Description of these Medications:

Topical pain medications deliver localized treatment to the site of pain with minimal systemic absorption. These compounds provide an alternative option to oral medications that have been ineffective or present other challenges (drug interactions, kidney/liver conditions, side effect intolerances, etc.).

Neuropathy
Amitriptyline
Carbamazepine
Gabapentin

Topical Anesthetic
Bupivacaine
Lidocaine
Menthol
Prilocaine

Musculoskeletal
Baclofen • Ibuprofen
Cyclobenzaprine • Ketoprofen
Diclofenac • Meloxicam
Flurbiprofen • Piroxicam

Other
Capsaicin
Pentoxifylline
Loperamide
Clonidine
Verapamil

*These medications can be compounded alone or in a variety of combinations, providing patients with a topical pain medication tailored to their individual needs.

Nail Formula EFT

Description of the Medication:

This medication contains two anti-fungals (Econazole and Terbinafine) and Flurbiprofen in a proprietary base that is used to treat nail fungus.

How to Use this Medication:

- Apply twice daily
- Soak nail for 5-10 minutes in warm water, then dry
- Use provided brush to apply medicine to nail and surrounding skin
- Allow medicine to dry
- Wash hands after application

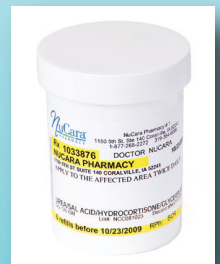

Foot Xerosis Combinations

Lactic Acid • Salicylic Acid
Urea • Hydrocortisone

Description of these Medications:

Urea is used to help soften dry, rough skin by promoting rehydration, which will ease any necessary removal of skin. **Salicylic acid** works to slough off skin cells more readily. **Lactic acid** has a keratolytic effect and helps retain moisture in the skin. Additionally, **hydrocortisone** can be used to help minimize redness, itching, and inflammation that may be associated with dry, rough, or cracked skin.

Example combinations:

Lactic Acid 10%/Urea 40% Cream
Lactic Acid 10%/Salicylic Acid 3%/Urea 45% Cream
Urea 40%/Salicylic Acid 5%/Hydrocortisone 1%

*A NuCara pharmacist thoroughly counsels all patients on the use, storage, and side effects of all medications.
