

Home IV: Antibiotic Therapy

Home IV Antibiotic Therapy is an excellent alternative for many patients whose medical conditions warrant discharge from the hospital and, at the same time, require prolonged parenteral antibiotic therapy.

Common diagnoses for home IV antibiotic therapy:

- Cystic Fibrosis
- Osteomyelitis
- Pneumonia
- Cellulitis
- STDs
- Septic Arthritis
- Prostatitis
- Wound Infection
- AIDS Related Infections
- Catheter Infections
- Otitis Media
- Endocarditis
- Urinary Tract Infection
- Respiratory Tract
- Sinusitis Infections

Advantages of home IV antibiotic therapy:

- Patients are more comfortable, often recover faster and experience fewer complications.
- Home IV Therapy costs considerably less than hospital administered therapy.
- Enhanced quality of life: patients on home IV therapy are able to enjoy routine activities, hobbies, and in many cases, are able to return to work.

NuCara IV Services:

- NuCara professionals assess and monitor patients on a case-by-case basis, coordinating therapy with the patient's physician, local nursing agencies, and family members.
- NuCara utilizes nurses with infusion training and experience, and provides training for area nursing agencies.
- Complete patient training in appropriate self care is provided; this training includes family members who may participate as caregivers.
- NuCara services include the personal delivery of all needed equipment and supplies, and 24-hour, on-call availability.

To refer a patient, please contact your local NuCara Pharmacy for an immediate free assessment.
