Stop Germs! Wash Your Hands.

When?

- After using the bathroom
- Before, during, and after preparing food
- Before eating food
- Before and after caring for someone at home who is sick with vomiting or diarrhea
- After changing diapers or cleaning up a child who has used the toilet
- After blowing your nose, coughing, or sneezing
- After touching an animal, animal feed, or animal waste
- After handling pet food or pet treats
- After touching garbage

How?

WET your hands with clean, running water (warm or cold), turn off the tap, and apply soap.

LATHER your hands by rubbing them together with the soap. Be sure to lather the backs of your hands, between your fingers, and under your nails.

SCRUB your hands for at least 20 seconds. Need a timer? Hum the "Happy Birthday" song from beginning to end twice.

RINSE hands well under clean, running water.

DRY hands using a clean towel, hand dryer, or air dry them.

Keeping hands clean is one of the most important things we can do to stop the spread of germs and stay healthy.

Handwashing: Keeping Your Family Healthy

Handwashing is an easy, cheap, and effective way to prevent the spread of germs and keep kids and adults healthy. When your family is healthy, you don't have to worry about missing school, work, or other activities.

Help your child develop handwashing skills

Parents and caretakers play an important role in teaching children to wash their hands. Handwashing can become a lifelong healthy habit if you start teaching it at an early age. Teach kids the five easy steps for handwashing—wet, lather, scrub, rinse, and dry—and the key times to wash hands, such as after using the bathroom or before eating. You can find ways to make it fun, like making up your own handwashing song or turning it into a game.

Lead by example

Young children learn by imitating the behaviors of adults in their lives. When you make handwashing part of your routine, you're setting an example for your children to follow.
