Easy-to-Open Pouches

**TCGRx's Versatile Packaging:**  
Saves nurses' time so they can do what they were trained to do:  
**Care for patients**

**Safer for Patients, Easier for Nurses**

## Nurses Benefit from TCGRx's Flexible Packaging

A continued nursing shortage means that today's nurses are expected to do more in less time. And when it comes to medication administration, the demands can be overwhelming.

That's where our packaging comes to the rescue. Our easy pull-and-tear pouch reduces med pass time while eliminating the repetitive strain injury that comes with punching pills from blister cards.

## Multi-Dose/Unit Dose Boxes

Can be organized by:

- Patient and pass time
- One patient per box
- One med per box

Multi-dose and unit dose boxes available to facilitate cycle fills and various cabinet configurations

## Safety

Our packaging reduces the risk of dispensing the wrong medication. Our clearly labeled packages make it easy to identify and accurately administer medication against the Medication Administration Record (MAR). Our easy-to-read labeling is flexible and allows the font to be as large or small as you need it.

An optional barcode serves as yet another compliance checkpoint. Bedside scanning identifies the patient, nurse, and package to ensure accurate medication delivery – and maximum patient safety. In addition, the back of our package is transparent, making it easy to visually check medication. Packages are kept intact until medication is dispensed so prescription information is available all the way to the bedside.

## Travel Friendly

For families, a weekend with their loved ones can be a happy experience. But for the staff, it means additional work to prepare their medications. Our packaging makes it simple to separate a few days of medications for those short trips. Plus, there is less confusion for your patient, because they'll receive the same medication packet as they would in your facility. And the easy-to-read labeling lets family members know exactly when their loved ones need their medication.

## Save Space, Time, and Money

Our packaging optimizes the physical space needed to keep ample supplies of medication on hand. You can be more organized, use your space more effectively, and audit inventory more efficiently.

Both unit dose and multi-dose package strips can be laid out in a continuous strip next to the MAR, with a transparent back that makes checking even easier.

Only the medications for the present med pass are pulled so it is not necessary to return or rotate medications.

## Cart Conversion

Consult with your pharmacy to discuss cart drawer conversion options.

- Pouches fit into many existing carts
- Cart companies today make a wide variety of pouch packaging drawer kits that make cart conversions easy
