

CO₂ Controller

Effective pH control in pool water

The ProMinent CO₂ Feeder is designed to utilize Carbon Dioxide (CO₂) in the control of pH levels in pools and spas.

There are a number of advantages when using CO₂ for pH control compared to acid. Adding CO₂ will not contribute to a TDS increase in water, thus reducing the amount of make-up water required to maintain the water quality. It is much safer, as there is no mineral acid solution or fumes present on-site, which solves the problems associated with handling acid and corrosive fumes. It is also simple to install and operate.

The ProMinent CO₂ Feeder is equipped with all the necessary components for easy installation, reliable performance and safe operation. The design incorporates an electronic solenoid valve and a manually adjustable flow-meter.
