MY ROLES

Prod Mgr

Architecture

Client Service

UX Designer

UI Designer

Visual Design

Creative Direction

QA

CUSTOMERS

MY
VENDORS

3D Modeling

Retouching

Video

Talent

Post Prod

Compositing

Development

WHAT WAS MY ROLE?

Visual Designer - Exploration. I was invited to do a conceptual How Might We. It became a full project of over \$250k that lasted over a year.

Adobe Creative Cloud

Information Architect - Personas to Ecosystem Metaphor + Product flows

Excel Spreadsheets, Adobe Illustrator Flows, Axure for lo-fi flows

UX Designer - Flows, Wireframes, Design Sessions with experts/stakeholders

Axure, Illustrator, Presentation tools, Photoshop, Collaboration

Creative Direction of the overall vision aesthetic with stakeholders

Adobe Creative Cloud - ie Photoshop proof of concepts especially depicting pathways, product placements

ADDITIONAL ROLES

Project Manager - scoping work, sourced passthrough financial entity, budget creation and contract management. My SOW came in \$250,000 under their agency's budget!

Standard Office Apps

Relationship with Production Company for 3D, Talent, Video and Composition and Development Team (2 Flash devs)

Competitive Research & Analysis, Win-win Bargaining, Client Representative to Vendors

Liaison to Analytics Team for code system creation and implementation with Dev team to assign button click responses.

Extensive Excel Worksheets for Products and corresponding codes

TEAM SIZE - CLIENT

Healthcare IT Product Owner

Healthcare IT Public Large Enterprise Website Producer

Large Enterprise Client-side Creative Content Director

Stakeholders - Michael Dell, Client Partners: Rubbermaid, Barco,
...

TEAM SIZE - PRODUCTION

Dell certified partner Agency pass-through

Patrick Nolan Creative - Client Relationship and PM

3D Production Facility staff of President, Tech Director, PM, 3D artists, video and sound production team, Talent, Make-up/ Wardrobe, Development staff of two

Analytics Partners - Ion Interactive: Two representatives

PROJECT SCHEDULE

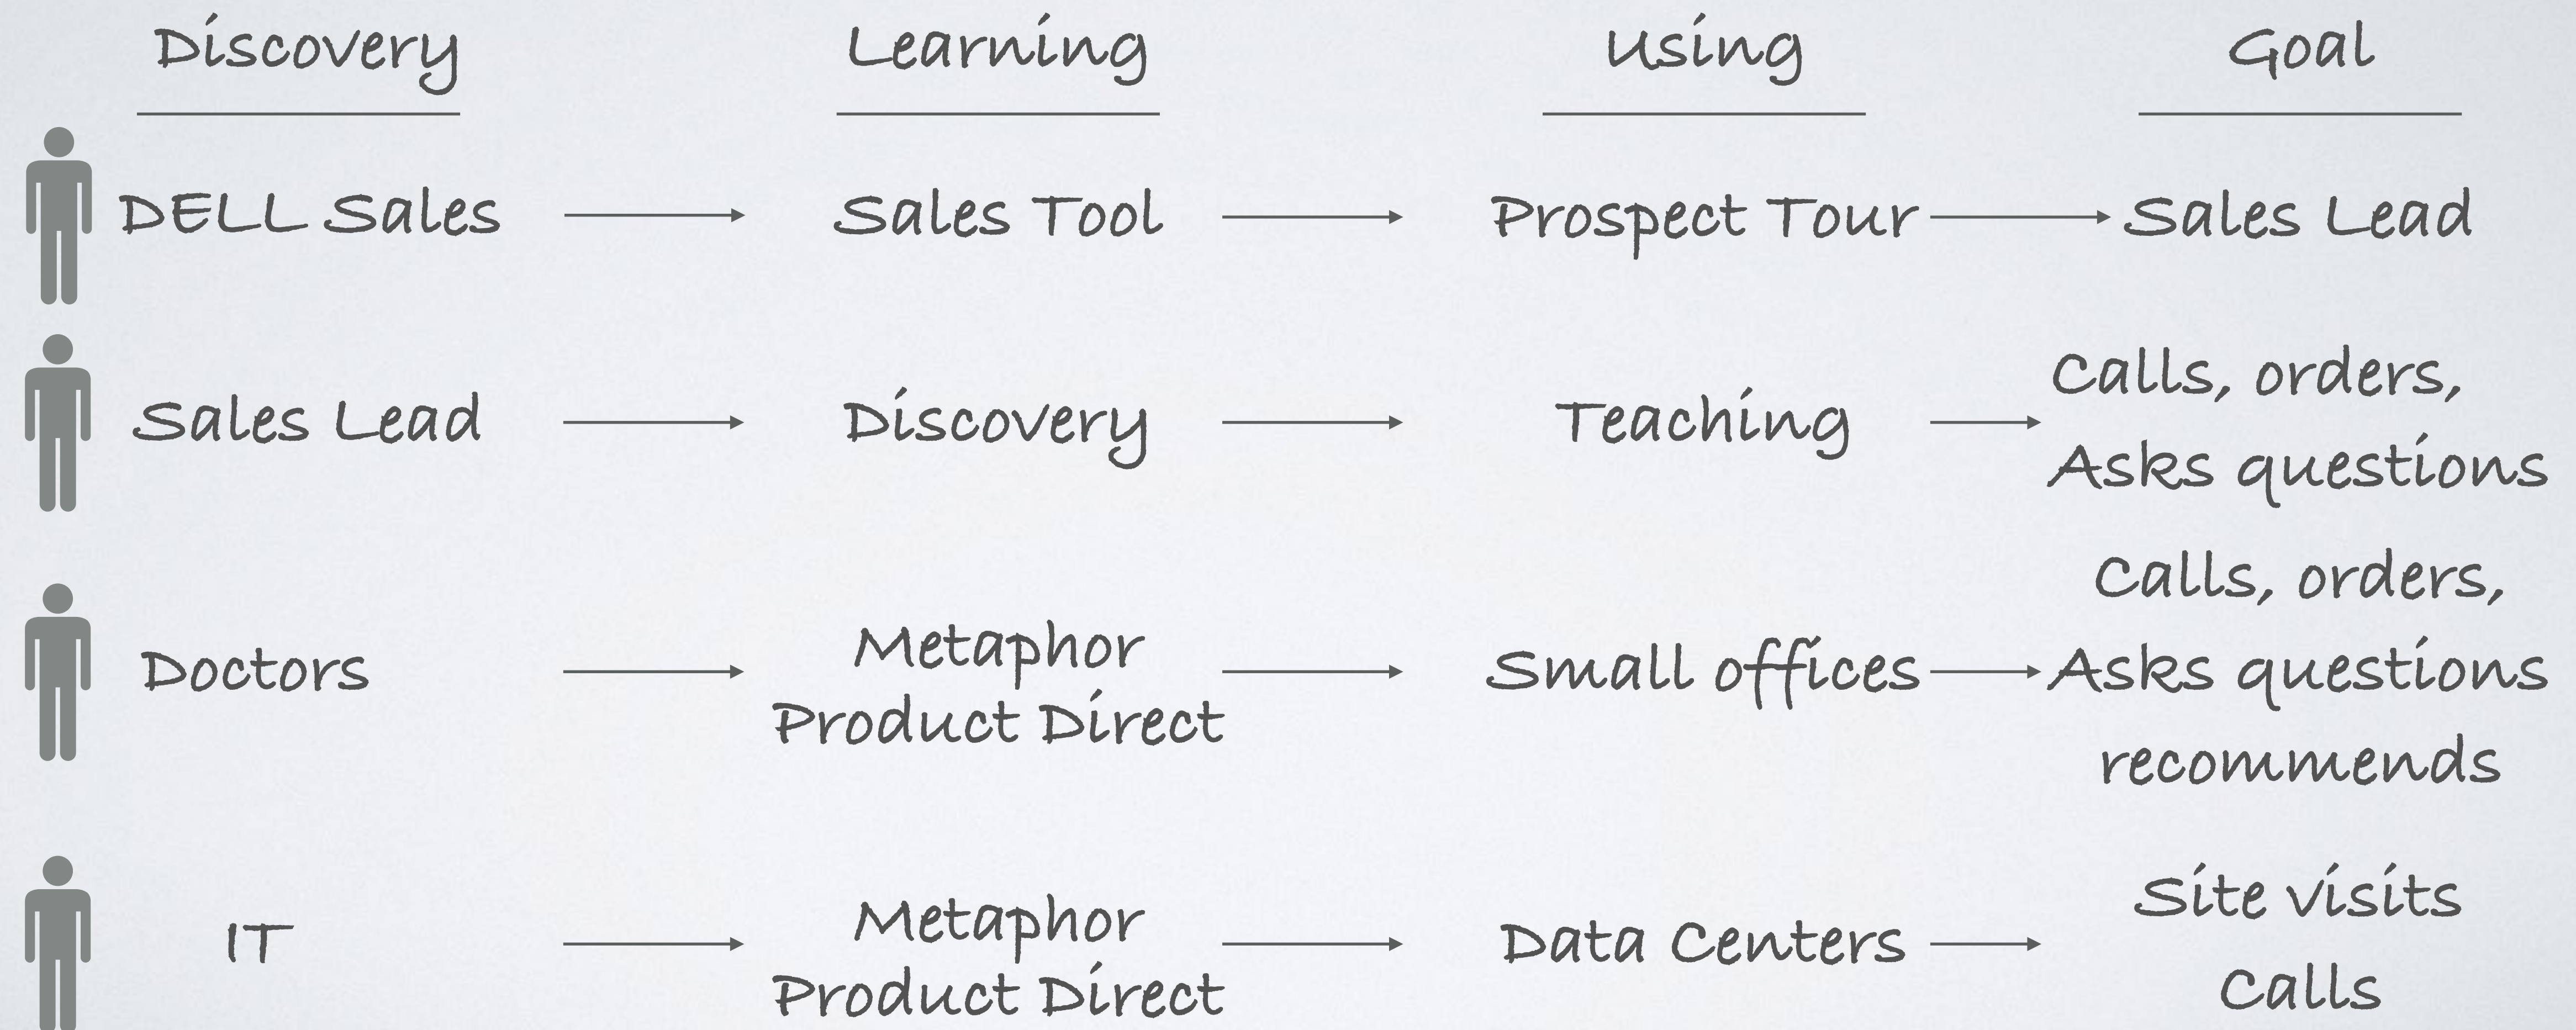

VI.0 JUNE 2010 to JANUARY 2012 with 3 updates

DEFINING THE UX OPPORTUNITIES

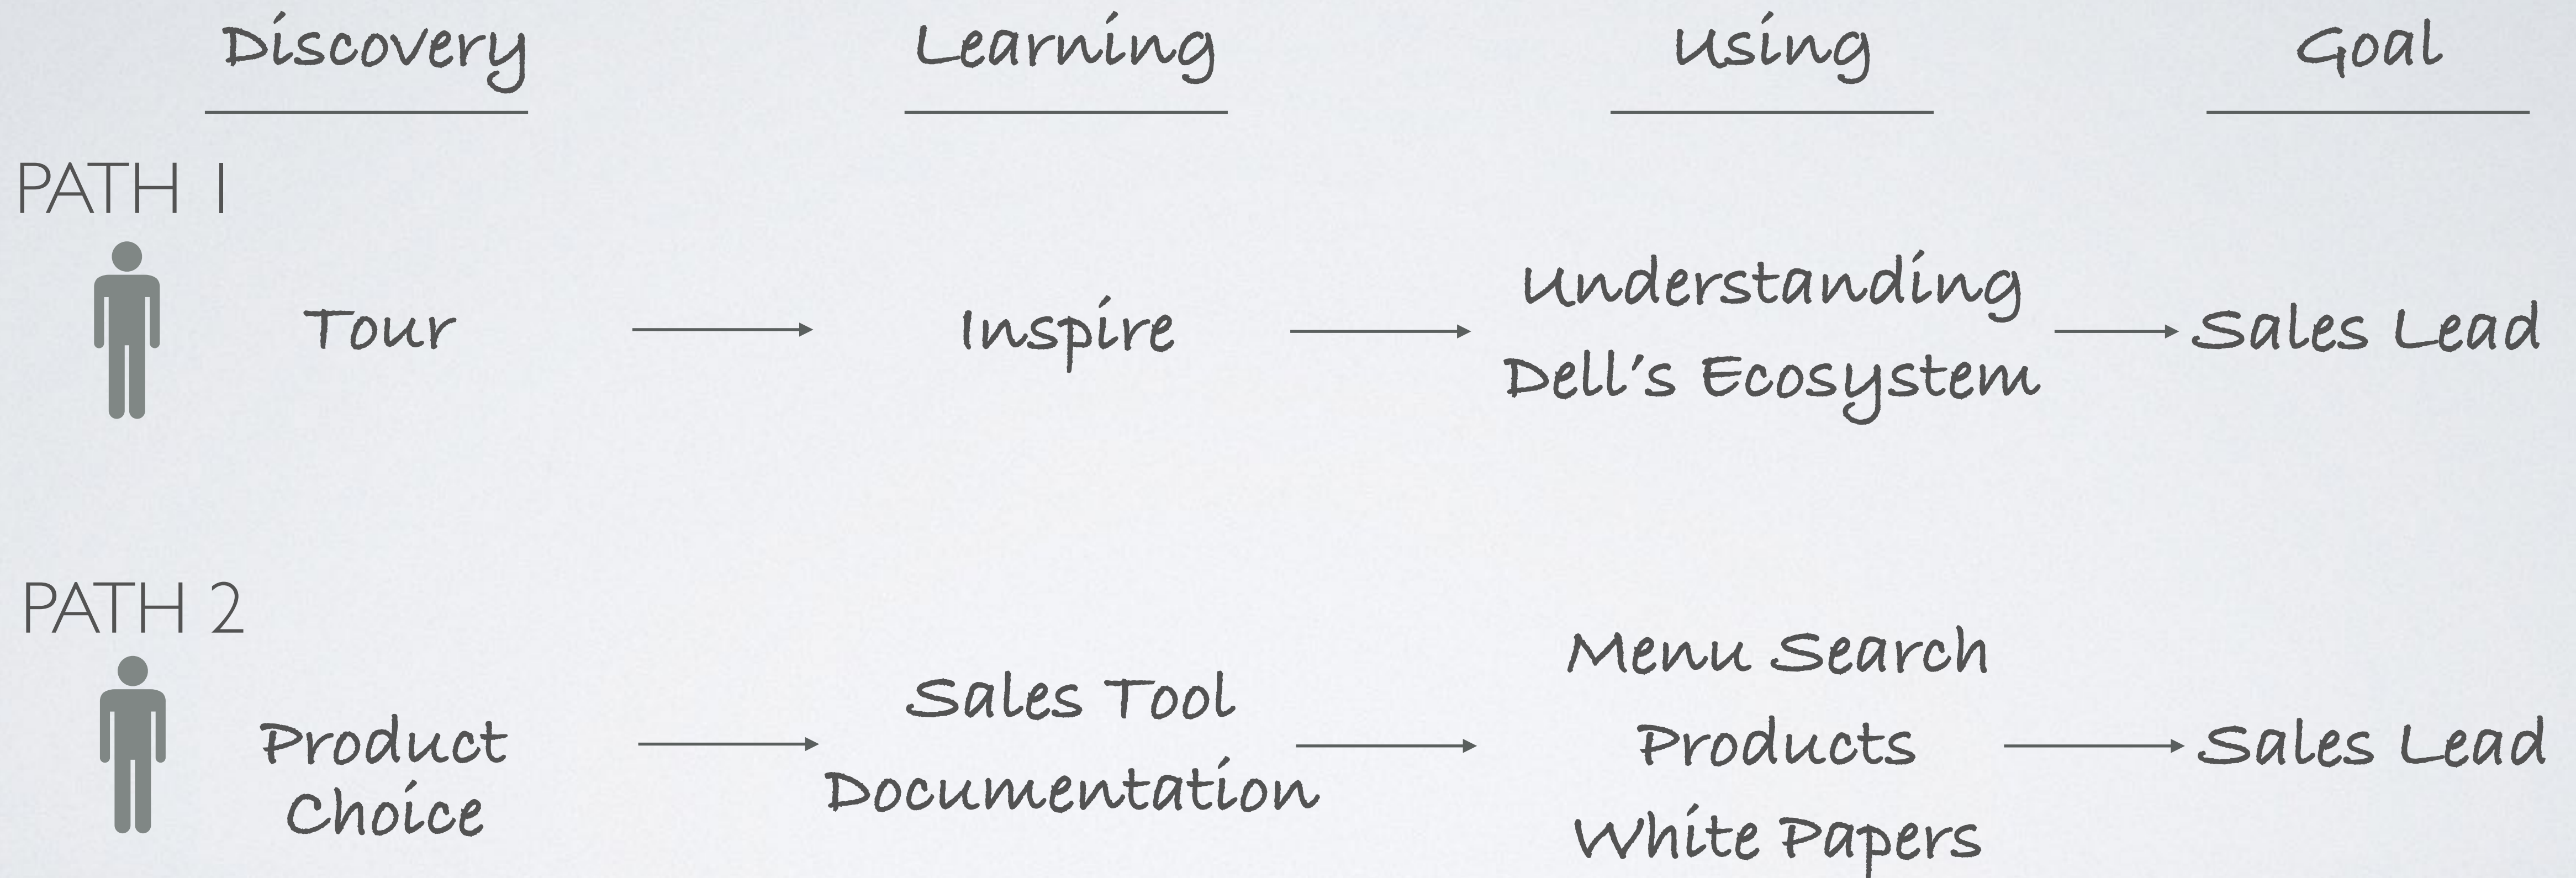

- MICHAEL DELL IDENTIFIED NEED TO HELP SALES EXPLAIN HEALTHCARE SOLUTIONS
- AUDIENCE - HEALTHCARE IT STAFF, DOCTORS, PAYERS, DATACENTERS, DELL SALES TEAMS
- DEFINING THE FLOW OF THOSE USERS THROUGH THE SITE
- DISTILLING THE JOURNEYS

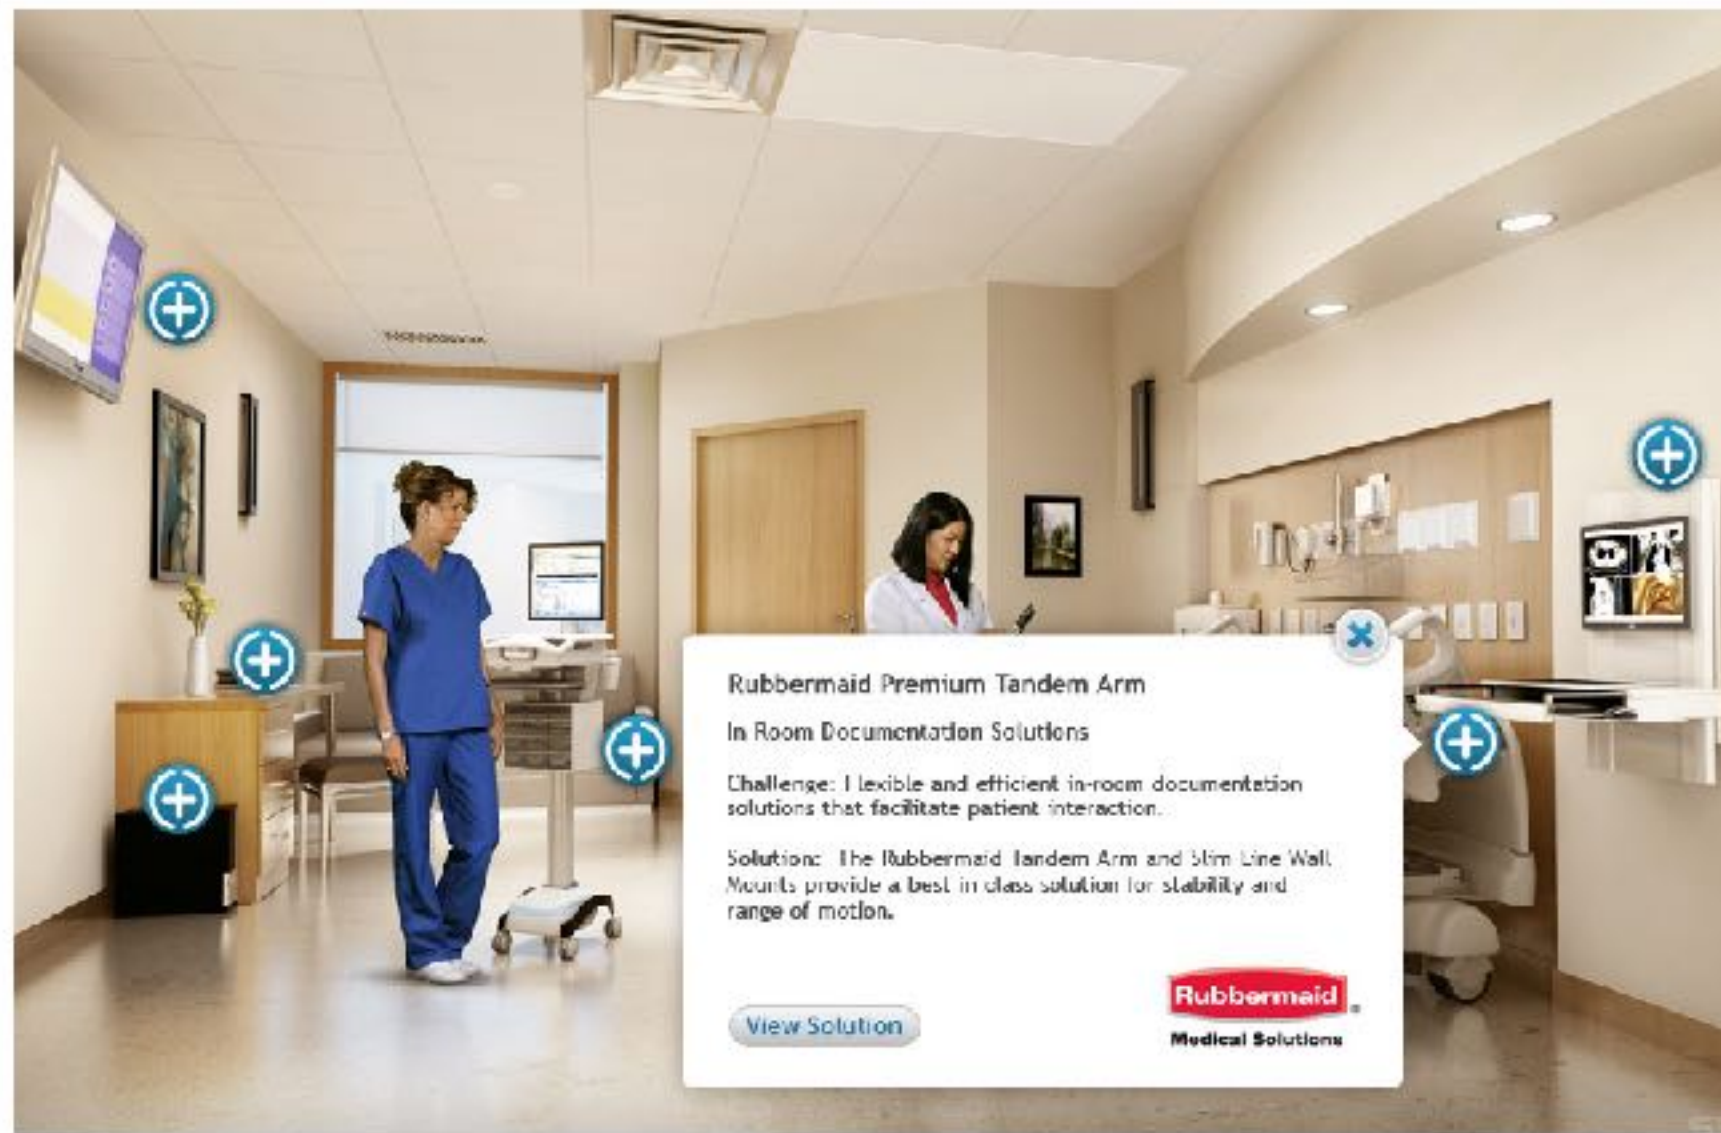

DEFINING THE USER EXPERIENCE

REFINING THE USER EXPERIENCE

BUILT-IN TESTING INTEGRATIONS

Discover Healthcare IT

Rubbermaid Medical Solutions

Medication Carts | Wall-Mounted Workstations

Designed to enhance patient care

Rubbermaid Medical Solutions wall-mounted workstations are designed to improve nursing efficiency and reduce unnecessary steps by making computer resources conveniently available throughout the medical environment. Rubbermaid offers these series of wall-mounted workstations to fit almost any medical environment.

- Tandem Arm™ Wall-Mounted Workstation** – The Tandem Arm redefines the wall-mounted workstation. Dual arms moving in tandem provide best-in-class stability and range of motion. The work surface facilitates medication preparation and supply accessibility, and dual pivot points maximize rotational range of motion.
- Slim Line Wall-Mounted Workstation** – The Slim Line maximizes space. At just 4 1/8" from the wall when stowed, it's ideal for in-room or hallway applications.
- Wall Cabinet Workstations** – Wall Cabinet Workstations are designed to provide maximum aesthetic flexibility and best-in-class performance. Features include advanced keyless entry system, generous work surface and auto on/off task light for reducing visual strain and for nighttime use.

DEMO

Integrations

ion empowers your other marketing technologies to deliver higher fidelity, data-driven scoring, targeting, segmentation and personalization.

Native to Standard Integrations

From native integrations with Oracle Eloqua, Salesforce, Marketo and Demandbase to standard integrations with Mongoose Metrics, Omniture and Crazyegg, ion interactive smoothly shares its wealth of explicit, descriptive, interactive content data with both up and downstream.

HYPOTHESIS

- Users from distinct audiences will auto-align with a metaphorical tour of the healthcare ecosystem AND busy professionals and return customers will tend to use the menu system.
- We put the two pathways in front of our experts, partners and in front of sales and users found their own preference. The bias is that a user will already have a tendency toward an interaction style that meets their purpose. We didn't have complaints about having a choice.

CLIENT PRESENTATIONS

- These screens we're seeing are a good representation of how creative presentations were delivered or demonstrated. Live demo's were available once our sandbox was ready.
- Financial presentations were received as Document files written by me and placed into the Pass Through agency boilerplate and forwarded to the Contracts Department.
- Throughout the concept and modeling process, Creative toolkits were used that contained rough wire models before processing full 3D. All final acting talent was screened by the client prior to casting. During final stages, I walked the Client through the functionality then allowed them to "break it". We received change orders and sent them to a backlog for the developer.

COLLABORATION

The types of collaboration track closely with the Schedule Page. I routinely returned to the Large Public Enterprise producer, content creator, and medical copywriter to ensure accuracy.

For the production stage, the Client content team remained in contact almost daily and were briefed or received demos as available.

The coordination of their voice with my Production Studio came through my constant contact. The 3D modelers had done some live action previously but our Ask included analytic stacks that they were unfamiliar with. Additionally passing code through the Flash layers and firewalls was a strange new experience.

COLLABORATION FORUMS

- In Person Client on-sites for heavy duty discussion sessions 2-3 hours
- For the flows, pathways and creative presentations, I definitely went in.
- Initial and latter stakeholder presentations were held in Dell Conference rooms where the Client team and myself presented.
- Final work was presented to Michael Dell by Healthcare Teams at Dell.

WOW. IF I HAD IT TO DO OVER?

- Clearly the technology stack. Flash, Liveball, Ion Integration was a specific requirement to dovetail into Dell's CMS/Ad Testing programs that affected many other systems and internal sales users.
- I would like to have been more exposed to the early user journey data but also the results data. That was not clear though I'm seeking more information from Dell sources.
- Doing it over depends a lot on how their Analytics have evolved. Obviously, I don't have a live demo anymore because HTML5 has taken over. Tragic for a project this detailed.
- Doing a mobile version. We found performance tradeoffs for Flash videos on the desktop for the cool transitions and were proposing a mobile versions that didn't materialize.

DO OVER CONTINUED.

- Perhaps doing a pure Menu Driven version with some visual representations of the medical ecosystem. Hot spotting the images did provide a lot of clickable options however. Videos improved the attention viewing time.
- Two more developers to remove bottlenecks around new technology.
- Better actors. We had limited screening time and accent issues.

Explore Dell Solutions with Discover Healthcare IT

Dr. Jamie Collins • November 21, 2011

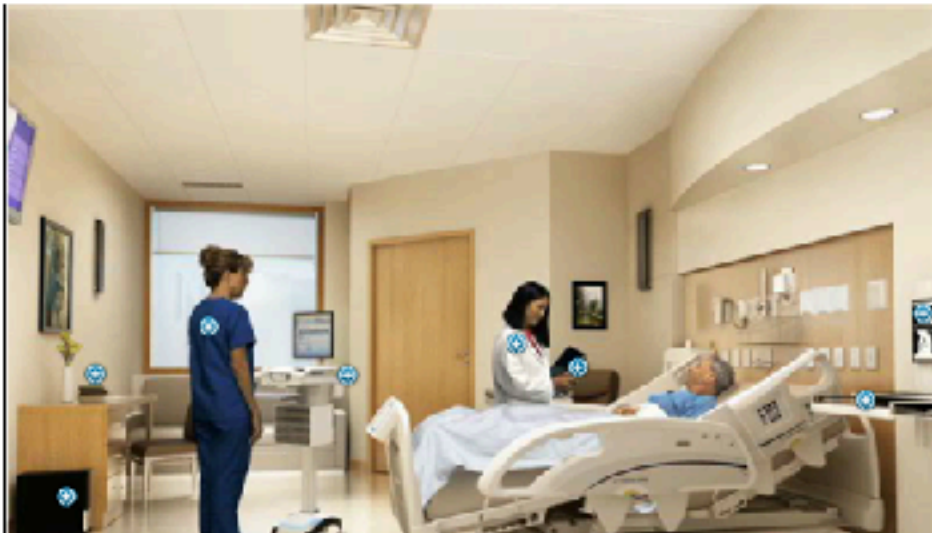

SHARE

Last week Dell launched Discover Healthcare IT, a virtualized website that allows users to identify their biggest pain points and explore potential solutions – all from their own point of view. Whether you represent a hospital, payer organization or physician practice, you'll find something you can identify with when you take a tour using this interactive tool.

Discover Healthcare IT

You'll see clinicians and administrators using Dell solutions to improve patient care and safety, enhance clinical collaboration, enhance the patient experience and make the reimbursement system more efficient and effective. You'll see IT professionals using Dell innovations to give caregivers the power to do more – whether through mobile solutions, cloud computing, consulting or other services. The tool lets you choose what to explore, and opens the door to a new world of information-driven healthcare.

Healthcare is an area where we are investing heavily in our intellectual property and talent and it's paying off.

– Michael Dell

According to global analyst firm Gartner, Inc., Dell is now the No. 1 healthcare IT services provider in the world.
