

thermaduct[®]

HIGH EFFICIENCY AIR DISTRIBUTION

thermaduct[™] OUTDOOR RECTANGULAR

Thermaduct is our patented rectangular exterior ducting solution that offers high R-values and low air leakage. It provides the duct, the insulation and cladding all in one high performance product. Thermaduct is available in insulated values between R-8 and R-24 and offers extremely low air leakage. All these benefits are protected by a strong, UV stable 1000 micron vinyl cladding and built to meet or exceed the SMACNA Phenolic Duct Construction Standards.

thermaround[™] OUTDOOR ROUND

Thermaround is our patented round solution for exterior applications. This high R-value system offers an R-12 solution with extremely low air leakage. Thermaround uses the same UV stable 1000 micron vinyl cladding for a durable solution that will naturally shed water. In the interior, air passes over a smooth aluminum surface free from loose fibers to give your building better IAQ performance. This round solution is also available with multiple exterior cladding options for architectural applications.

inspiralR™ & FLOVAL™

INDOOR ROUND AND FLAT OVAL

InspiralR and Floval are our patent pending indoor round and flat oval solutions that are UL 181 Listed for 10" w.c. positive and 8" w.c. negative applications. InspiralR and Floval are lightweight systems and can offer up to a 75% weight savings versus traditional double wall spiral duct. This ultra low air leakage system also provides an R-6 insulated value. Tight on ceiling space? Floval is your solution as there's no need to insulate separately!

HIGH EFFICIENCY AIR DISTRIBUTION PRODUCTS FOR ANY APPLICATION

With metal prices on the rise, now may be the right opportunity to offer your customers a pre-insulated solution that will provide long term, energy saving benefits. For more information on Thermaduct's family of phenolic products for both indoor and outdoor applications, talk to your local Thermaduct Representative or visit us online at www.thermaduct.com.
