A handwritten signature in black ink, consisting of a series of loops and a horizontal line at the bottom.

PROTENG DISTRIBUTION CZ s.r.o., together with the manufacturer, share a vision of providing better security and protection against fires, protection of human health and properties, using a highly effective and automatic form of self-extinguishing systems PROTENG, where no human assistance, operation or other actions are needed.

On the 30th of July 2015, the effectivity of our PROTENG system was tested in the presence of the **firefighting rescue team and in the presence of engineers from the Faculty of security engineering of VŠB-TU in Ostrava**. They also participated in the testing of the PROTENG system, measurements of temperatures that arise during free spreading of fire inside the vehicle, but also of temperatures after the activation of the PROTENG system inside the engine compartment, **confirming that the PROTENG system is effective**.

The comparison of temperature changes within the engine compartment of a KIA Schuma LS automobile in two cases - when it is protected by the PROTENG extinguishing system and without the protection system.

The location of thermocouples inside the engine compartment:

The thermocouple TC8 was inside the vehicle and TC7 was on the floor inside the cabin.
