# Sequential Numbers, Barcodes, UPC Labels, and QR Codes

## SEQUENTIAL NUMBERING & CUSTOM PRINT

ACP International offers several options for sequential and custom numbering.

For sequential numbering, provide the number range (example: 0001–5000).

For custom numbering, submit a spreadsheet with numbers in a single column. If additional print details are needed (such as location name + number), include them in separate columns.

Common applications include utility poles, parking markers, lockout tags, permit decals, valve and utility identification, asset tracking, and other industrial uses.

## BARCODES

ACP International provides Code 39 barcodes, which encode alphanumeric characters (A–Z, 0–9).

Typical uses include warehouse signage, inventory management, site identification, compliance decals, utility pole tags, and transformer labels.

## UNIVERSAL PRODUCT CODES (UPC)

A UPC is a 12-digit GS1 identifier used to uniquely mark retail products for checkout scanning. They are required by major brick-and-mortar retailers and ecommerce platforms.

## QR Codes

QR codes are 2D barcodes readable by smartphones and scanners. ACP-generated QR codes follow the standard layout. If you need a branded or stylized QR code (e.g., with a logo), provide it as a vector file (EPS, SVG, or AI). If each item requires a unique QR code, provide the data in a spreadsheet.

Common uses include website links, GPS locations, compliance check-ins, regulatory information, and industrial applications.
