

Dear Healthcare Professional:

This is a brief overview intended for healthcare providers such as physicians, advanced nurse practitioners, physician assistants and nurses.

I'd like to take a minute to talk to you about compounded sublingual Semaglutide in SubMagna™ HMW.

Due to the overwhelming demand for OZEMPIC® and WEGOVY® and the related shortages for these drugs worldwide, I thought of how many pharmacies were jumping into compounding Semaglutide injectable medications that, in my opinion, don't have sufficient experience to do so safely.

I thought of the events of the past with the deadly fungal meningitis outbreak in 2012 due to non-sterile compounded injectable medications and my concerns grew about a similar situation occurring now in the profession that I love. I felt that there had to be a better way, a safer way, to compound this type of medication. To me, sublingual administration seemed like a perfect fit.

I encourage you to go to [www.subsema.com](http://www.subsema.com) and watch the video housed there and wade through all the information available to you through that website. After viewing, I encourage you to reach out to me at 609-465-0004 or [scott@reeffamilypharmacy.com](mailto:scott@reeffamilypharmacy.com)

Thank you so much for your time. I look forward to hearing from you soon to talk about having this compounded medication available for the patients you serve.

Sincerely,

A handwritten signature in blue ink that reads "Scott Reef". The signature is fluid and cursive.

Scott Reef, RPh/Owner
