Dear Prospective Patient (female),

Thank you for your interest in learning more about Bio-identical Hormone Therapy using hormone pellets. Since 2009, Dr. Jennifer Park has successfully treated over a thousand patients, male and female, using this approach, and her extremely satisfied patients are referring their friends and family due to their amazing results with this program.

To determine if Bio-identical Hormonal Therapy using pellets is the right approach for you, we would ask you to do the following:

1. Think about the symptoms that are motivating you to seek this type of treatment.
2. Read the enclosed article "Hormonal Imbalance?" This will describe in detail our program.
3. Read the "Pellet FAQ's" article for common questions and answers.
4. Decide if you would like to have a consultation with Dr. Park. Once you call to make this appointment, we will send you a packet of information including:
 - a brief Patient History Form for you to fill out and send in
 - a checklist of tests whose results need be reviewed before starting hormone therapy. These tests include recent pap smear, mammogram, pelvic ultrasound and hormone blood tests. Note that we cannot order any tests for you until you have had a consult with the doctor.
 - a discussion of our fees which are very reasonable compared to the Beverly Hills and other similar hormone clinics

Your initial hormone consultation with Dr. Park is through her medical practice with Fair Oaks Women's Health, where she is a full-time Board-Certified Ob/Gyn in private practice. This visit and any necessary testing is covered by most medical insurance plans.

After this visit, Dr. Park will determine if you are indeed a candidate for treatment using bio-identical hormone pellets. Sometimes, due to pre-existing medical conditions, you might not be a candidate. If you are, then we will schedule you to come back for the insertion procedure. Sometimes the insertion procedure can be done right after the consultation. This is for patients who come from a distance or those who "know" that they need to do this!

Bio-identical hormone pellets are not covered by most medical insurance plans. Once you present for your first insertion, you become a patient of Pasadena Pellet Therapy, a specialty practice dedicated solely to this form of treatment.

Thank you and we look forward to seeing you soon.

Sincerely,

Jennifer Y. Park, MD, FACOG
Pasadena Pellet Therapy
