Medical Clearance for Possible Testosterone Pellet Therapy

Patient Name _____ Date _____

Patient Date of Birth _____

The above patient is planning to consult with Dr. Jennifer Park regarding possible treatment with bio-identical testosterone delivered via subdermal pellets. Bio-identical hormone pellets (rice-sized pellets placed just under the skin two or three times a year), release pure testosterone directly into the bloodstream in a steady state while avoiding the risks to children or pregnant women (according to the FDA, minute contact exposure from a family member using topical testosterone gels or creams could be extremely hazardous for a child or unborn fetus).

Per the FDA, absolute contraindications to the use of testosterone therapy include: men with carcinoma of the breast or known or suspected prostate cancer. Having BPH (benign prostatic hypertrophy) is a relative contraindication.

The undersigned physician has a doctor-patient relationship with this patient, and does not believe that there are any medical contraindications to this proposed treatment.
