Resealing your boulder

Your boulder is sealed upon completion so there is no immediate maintenance required, however, it is recommended that you apply a sealer to your boulder on an annual basis to help prevent fading from the sun or moisture ingress.

Here is a Rust-Oleum product that can be used for sealing.

Dead Flat Clear
Part No 302151 – 11 oz. Spray

Sealing Instructions

- 1) Use water or compressed air to clean rock from any dust or debris.
- 2) Let dry completely (free from any moisture droplets)
- 3) Apply an even coat of topcoat sealer

Note: This product should not be used on any aluminum plaques that may be inset into your boulder. It is recommended that you cover or spray around any memorial plaque to prevent damage to the print or paint on the plaque.
