COMMON AREAS FOR MICROBIAL GROWTH

- Bathrooms
- Kitchens
- HVAC Systems
- Walls
- Roofs
- Carpets
- Furniture
- Plumbing

When moisture levels in your building surpass the dry standard, it could potentially lead to microbial growth beneath your carpet, inside walls, and even within your air ducts. As you know, microbial growth, such as mold, creates a less than ideal environment for your employees and guests. Even if the growth is hidden, the side effects can present themselves in various ways, such as musty odors, respiratory problems, and damage to porous building materials.

Cotton Global Disaster Solutions is a certified mold remediation company with 25 years of experience in property restoration. Available 24/7, businesses can rest assured knowing their facility and operations are in good hands.

THE MOLD REMOVAL PROCESS

- Assess the damage and create a course of action.
- Facilitate engagement of a certified industrial hygienist when necessary to establish a written protocol.
- Properly contain the affected area to keep your guests, tenants, and employees safe.
- Utilize commercial-grade equipment to regulate and control the facility's moisture levels.
- Clean and decontaminate the affected area and surrounding contents.
- Complete selective demolition to remove damaged materials.
- Restore or replace damaged building materials.
- Apply antimicrobials to help prevent future mold growth.
