

COMMUNITY PHARMACIES: DOING OUR PART!

While Pennsylvania faces the COVID-19 pandemic, community pharmacists are working hard to make sure that families have the medications they need. Despite not having full access to the recommended PPE, many independent pharmacies have developed creative alternatives and taken extraordinary precautions to protect you as we remain hard at work to meet the needs of our neighbors — just like we have for over a century.

Easy Drive-thru and Curbside Pickup

We want our community to stay safe. While many of our stores have closed to walk-in traffic, we transitioned to providing quick and safe prescription pickup options.

Increasing Staff Availability

We know our customers need us now more than ever. We're adjusting staff hours to make sure we're available to accommodate consumer needs.

Quick Delivery

To help customers meet the stay-at-home order, local pharmacies have increased their personal deliveries by the thousands, providing both prescriptions and OTC needs. As always, this same-day service is free of charge. That will never change!

Overcoming Drug Shortages

We are working with our wholesale partners and investigating secondary market options, at our own expense, to find the medications our customers need.

Fast Consultations

We're ready by phone and in some cases, by online video to answer the many questions families have about their medical needs.

Protecting Jobs

Despite this pandemic, we continue to employ thousands of Pennsylvanians. It's the right thing to do.

Waiving Mailing Fees

When we can't deliver a prescription, we'll mail it and waive the cost for our customers.

We are open and will continue to serve our patients and communities.
