

# Migraine Nasal Spray

*Fast-acting. Compounded. Prescribed for you.*

② COMPOUNDED · NASAL SPRAY · PHYSICIAN-PRESCRIBED

Migraines are more than headaches · they disrupt your day, your work, and your life. When oral medications are too slow or cause nausea, a compounded nasal spray delivers fast, targeted relief directly through the nasal mucosa. The Medicine Shoppe compounds custom multi-ingredient migraine nasal sprays · prescribed by your doctor and tailored to your specific needs.

## How It Works

### Ketorolac

*NSAID / Analgesic*

A non-opioid anti-inflammatory that blocks prostaglandin synthesis, reducing neurogenic inflammation that drives migraine pain.

### Lidocaine

*Local Anesthetic*

Blocks sodium channels in trigeminal nerve fibers, interrupting pain signal transmission for rapid relief from acute migraine pain.

### Metoclopramide

*Antiemetic / Prokinetic*

Reduces nausea and vomiting from migraines, and enhances absorption of co-administered agents by restoring normal mucosal function.

## Why a Nasal Spray?

Oral migraine medications can take 30-60 minutes to work · and if nausea is present, absorption is often unreliable. Nasal delivery bypasses the GI tract entirely, absorbing directly through the nasal mucosa for rapid onset in 10-20 minutes. Each ingredient works through a distinct mechanism, providing multi-modal relief in a single dose · without the systemic side effects of oral therapy.

## What to Expect

### Fast Onset

Relief typically begins in 10-20 minutes · significantly faster than oral medications.

### Multi-Modal Relief

Three ingredients address pain, inflammation, and nausea simultaneously in one spray.

### Discreet & Easy

A compact spray fits in a pocket or purse · use it wherever a migraine strikes.

### Custom Formula

Your prescriber selects the right combination and concentrations for your needs.

### Migraine Nasal Spray

Ketorolac · Lidocaine · Metoclopramide · custom dose

*Prescription required · Compounded to order*
