

# Apomorphine + Tadalafil

Fast-acting. Discreet. A fresh approach to erectile dysfunction.

✓ SUBLINGUAL TROCHE · FAST ONSET · NO PILL TO SWALLOW

If ED has been getting in the way — or if you've tried other options and want something different — this compounded troche dissolves under the tongue and combines two complementary ingredients to support arousal and blood flow. **No pill to swallow. No planning hours ahead.** Ask your doctor if apomorphine + tadalafil is right for you.

## How It Works

### Apomorphine 2 mg

Acts on dopamine receptors in the brain to trigger the natural arousal response — working with your nervous system, not just blood flow.

### Tadalafil 10 mg

A PDE5 inhibitor that relaxes blood vessels and increases circulation, supporting and sustaining the physical response.

## Why a Sublingual Troche?

- Faster Onset**  
 Absorbs directly into the bloodstream — no waiting for digestion.
- Completely Discreet**  
 Small, dissolves under the tongue. Nothing to carry or explain.
- Dual Mechanism**  
 Brain + body — apomorphine and tadalafil work through different pathways.
- No Pill Required**  
 Ideal for those with difficulty swallowing tablets.

## How It Compares

Feature	Apo + Tadalafil Troche	Standard ED Pill (oral)
How it's taken	<b>Dissolves under tongue</b>	Swallowed with water
Onset of action	<b>~15–20 minutes</b>	30–60+ minutes

### Apomorphine 2 mg / Tadalafil 10 mg

Sublingual troche · One dose, on demand  
 Compounded at The Medicine Shoppe, York PA

## Could This Be Right for You?

- You experience erectile dysfunction and want a faster, more discreet option
- Standard ED medications haven't worked well or cause unwanted side effects
- You prefer something that works with your body's natural arousal response
- You want a simple on-demand solution — no daily pill, no long wait

**Ask your doctor about apomorphine + tadalafil troches.**
