

# Reverie Cream

A compounded topical for women's arousal, sensitivity & pleasure.

✓ TOPICAL · FAST-ACTING · PHYSICIAN-PRESCRIBED

Reverie is a custom-compounded topical cream formulated to enhance arousal, increase sensitivity, and support sexual satisfaction in women. Applied directly before intimacy, it works by **increasing local blood flow and nerve sensitivity** — helping your body respond the way you want it to. Discreet, effective, and available by prescription.

## How It Works

### Sildenafil 1%

Relaxes smooth muscle and increases blood flow to sensitive tissue — the same mechanism as well-known arousal medications, applied locally.

### Arginine 6%

A natural amino acid that boosts nitric oxide production, amplifying vasodilation and heightening nerve sensitivity.

### Theophylline 3%

Sustains and prolongs the vasodilatory effect, extending sensitivity and the duration of arousal response.

## What You May Experience

### Heightened Sensitivity

Increased nerve response and awareness to touch within minutes of application.

### Enhanced Arousal

Greater ease of arousal and more intense physical response.

### Improved Satisfaction

More fulfilling intimate experiences — on your terms.

### Works With Your Body

Supports natural response rather than forcing it — no systemic side effects.

## How to Use

Apply a small amount topically to the clitoral area 5–15 minutes before intimacy. Effects typically begin within minutes. For use as directed by your prescriber.

## Reverie Cream — Compounded at The Medicine Shoppe

Sildenafil 1% · Arginine 6% · Theophylline 3% · Topical cream

*Prescription required. Compounded to order.*

## Could Reverie Be Right for You?

- You've noticed decreased arousal or sensitivity that affects your intimate life
- Hormonal changes, stress, or medications have dulled your physical response
- You want an on-demand, non-systemic option that works when you do
- You're looking for something your body responds to — naturally and quickly
