Situation Overview

Situation Report 2 was published on October 12, 2018 and is a regional report on 14 counties impacted in Florida. This report provides county and community level updates and includes the first communications outage report by the FCC issued October 11 as well as a link to our Humanity Road strategic heat map.

Situation Report No.1 was published on October 10, 2018 and is based on early indications in social media following landfall for Hurricane Michael on some of the counties of Florida in the United States. The report also includes official accounts and useful information links.

Humanity Road activated its disaster desk on Tuesday, October 9, 2018 in advance of landfall to amplify official guidance.

The storm made landfall on October 10 as a Category 4 hurricane near Mexico Beach, Fla., just before 1 p.m. local time. By 4 p.m., the storm was 30 miles west of Bainbridge, Ga., and had been downgraded to a Category 3, with maximum winds of 125 m.p.h. The governors of Alabama, Florida, Georgia, North Carolina and South Carolina have all declared emergencies for at least parts of their states, encompassing tens of millions of residents. source

- Agency for Health Care Administration has posted a [helpful resource for Hurricane Michael]. The agency requires all licensees providing residential or inpatient services to use an approved database for reporting its emergency status, planning or operations. Notify the Agency for Health Care Administration regarding evacuations and other issues you encounter during and after the storm by using the [ESS] system. If you need any assistance please contact your local Emergency Operations Center--a link is available at: [https://www.floridadisaster.org/counties/]

- **Explanation of the Facebook Imagery:** [Humanity Road Special Facebook Mapping Report](#)
  Our Special Facebook Report contains imagery on population density changes for before and after the hurricane. The red indicators on the maps show the difference between the population at the time of the crisis and the population estimated for non-crisis conditions (baseline). This means the red is showing a decline in population versus 3 months ago. It could be seasonal trends or evacuation patterns. The blue map is a measurement called “Crisis” The blue dots reflect the observed number of people during overall period of crisis, so in essence - The blue dot-maps are showing locations where population are accessing Facebook on the given date from that location.
