SERVING OHIO, MICHIGAN, & INDIANA SINCE 1996

Electrostatic Commercial Disinfectant Service

Offered to Clean Team Customers for Disinfecting COVID-19

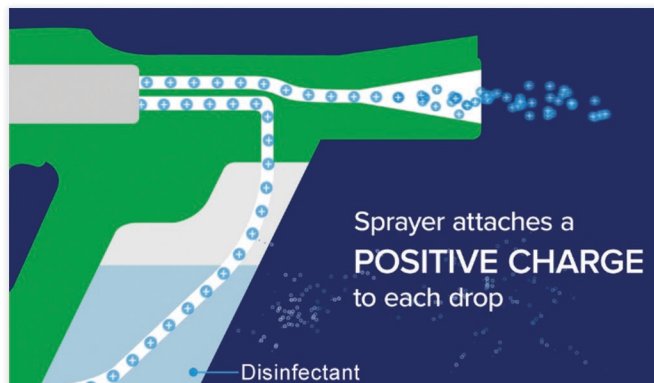

Clean Team is using advanced technology to effectively and efficiently clean even the most hard-to-reach surfaces with electrostatic disinfecting.

Our trained professional cleaning team will disinfect all surfaces using a rapid, uniform application of fast-acting chemicals to allow for exceptional coverage in a fraction of the time - using chemicals that boast kill times up to 10 times faster than competitive products.

When liquids are charged electrostatically, a positive charge is added to each droplet as it propels through the sprayer. Like magnets, these droplets are attracted to surfaces - which typically carry a negative charge - and spread out uniformly along that surface.

- Better surface adhesion
- Uniform coverage, even in hard-to-reach areas
- Less chemicals required to treat the same surface area
- Faster application time

The disinfectant and methods used meet the CDC recommended procedures to disinfect surfaces of the COVID-19 virus.

Electrostatic Cleaning System provides rapid, uniform application of fast-acting chemicals to allow for exceptional coverage in a fraction of the time.
