Test Descriptions

Vertical Jump-

Total Power

To measure vertical power production of the full body using a countermovement jump WITH the use of arm action. The results are listed in inches.

Flight time (FT; ms): is the time that the athlete is not in contact with the mat for a given jump

Height: The height achieved by an athlete in a particular jump.

Impulse: is the net upward impulse of each athlete or the net upward momentum (derived from the take-off velocity)

Peak Power Output (PPO; Watts): Is the peak power output of the jump, calculated using the equations of Sayers (Sayers, S.P., Harackiewicz, D.V., Harman, E.A., Frykman, P.N., and Rosentein, M.T. (1999) Cross-validation of three jump power equations.

PPO/Mass: Is the power output to mass (body weight) ratio of the athlete

Linear Sprint

To measure the acceleration of athletes sprinting in a straight line. Multiple splits can be measured, but 10, 20, 40 and 60 are the most common in athletic development. The results are listed in seconds. The velocity is their speed in miles per hour, to indicate acceleration.

NBA Lane Agility

The Lane Agility drill is used to test body control, change of direction and speed, as the players work their way around the lane, sprinting forward, backpedaling and moving laterally around cones.
