

Sea Fish Industry Authority Executive Summary

The following is an independent study performed by The Sea Fish Industry Authority comparing the thermal performance of CoolSeal Fish Packaging with Polystyrene and Fiberboard (Kraft) Boxes.

The results of this study show that CoolSeal boxes performed similarly to Polystyrene in terms of insulation. The report provided an unexpected result in that the use of CoolSeal packaging in a cold chain actually allowed the cold chain to work more effectively influencing the temperature inside the containers and adding days of shelf life to the product inside.
