

# **Primex OneVue Sense Promotion**

Ends March 31, 2022

As we continue to battle the COVID-19 pandemic with new variants emerging, more stringent guidelines for vaccines and other critical medication storage are being requested. As a result, The Bureau of Professional Licensing (BPL) in the Michigan Department of Licensing and Regulatory Affairs (LARA) recently announced they will be enforcing a requirement that pharmacists maintain continuous monitoring thermometers for refrigeration units in pharmacies to also include digital logging of temperatures vs. manual documentation.

The OneVue Sense temperature monitoring solution meets and exceeds these requirements! FPN members that choose to partner with Primex by March 31, 2022 are eligible for membership pricing! Please reference promotion code PHARM2022FPN when contacting Primex to receive this promotional pricing.

#### Here's What You Get

## **Full Coverage Monitoring Service & Support**

- Sensors, probes, power cords, and mounting
- 24-month probe replacement
- OneVue monitoring software

- Primex Service Support

"Knowing that the vaccine is safe is very crucial. When you think about it, the COVID-19 vaccine is liquid gold."

Hashim Zaibak, PharmD, Owner of Hayat Pharmacy

Your COVID-19 vaccine supply can — and likely will — save lives. Ensure your vaccines are prepared to do so with a robust temperature monitoring system in your facility. With over 45 years in business, trust Primex OneVue solutions to keep your vaccine supply safe, effective, and ready to be administered.

# Primex OneVue Sense Temperature Sensor

# Keep Your Vaccines Safe and Effective

Protect perhaps the most critical vaccine of our lifetime with Primex OneVue solutions. No matter the storage temperature requirements, don't just fully rely on your refrigerator or freezer to work perfectly and safeguard these vaccines. Let automated temperature monitoring and proactive alerts within Primex OneVue give you peace of mind knowing your COVID-19 vaccine supply is safe.

### **OneVue Sense Solutions & Features**

- Monitors temperatures as low as -200°F
- Continuously monitoring sensor automatically logs and reports temperature data
- Data reports can easily be generated from a desktop or mobile device to demonstrate regulatory compliance when needed
- If temperature leaves a preset range, OneVue automatically triggers audible and visual local alarms, as well as automated email, phone call, or text alerts
- Three power options: Battery, AC, or PoE
- Single or dual probe models available
- Choose either standard or extended range (cryogenic) probes

"The reason we implemented OneVue temperature monitoring system at Hayat Pharmacy was because the reliability and the real-time monitoring with real-time alerts. We are able to track the temperature regularly, even when we aren't in the office or pharmacy, versus the old digital data loggers, that wasn't the case."
